

# Alexander Graham Bell

Born march 3<sup>rd</sup> 1847 - Died august 2<sup>nd</sup> 1922

He did not have a lot of money and did not go to school. He had a tutor instead. When his invention got big he became very rich. He went to royal Edinburgh High and was also born in Edinburgh.

He left at the age of fifteen because he had low grades and just wanted to do science.

Alexander Bell was famous for his telephone invention it was the first of that kind and is now still used to communicate with others.

He made his first invention when he was 12 it was a homemade device that combined rotating paddles with sets of nail brushes, creating a simple dehusking machine that was put into operation and used steadily for a number of years.
